

Li Deng

Ottawa, Ontario

SUMMARY

Software developer with 4 years of experience in web development, including 2+ years on a small engineering team owning design, peer review, testing, deployment, and production troubleshooting end to end. Strong in JavaScript, debugging and code optimization, and cloud platforms, with a track record of analyzing and solving technical problems. Experienced translating client requirements into technical designs and documenting them clearly, and works well alongside senior developers.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript (ES6), Node.js, HTML, CSS, Python (personal projects)

Development: REST API design, Node.js, Koa, LitElement / Web Components, debugging and code optimization, technical documentation and specifications, peer code review

Cloud & Platforms: AWS (Lambda, S3, DynamoDB, EventBridge, CloudWatch, SES, Transfer Family, IAM)

Practices & Process: Agile / Scrum, full software development life cycle, DevOps, software configuration management, release and environment management, Level of Effort (LOE) estimation, coding standards and best practices

Security & Access Control: Role-based access control (RBAC), permission modeling and enforcement, privacy and data-protection considerations in system design, IAM roles and policies, secure file transfer (SFTP)

Tools: Git and GitHub (source control and code repositories), GitHub Actions CI/CD, Terraform, CloudFormation, Serverless Framework, CloudWatch, Sentry, Mocha, Chai, Playwright, Microsoft Office

PROFESSIONAL EXPERIENCE

Software Developer II — SkillsWave Corporation | Ontario, Canada | Jul 2024 – Jun 2026

- Triaged and resolved production incidents across AWS CloudWatch logs and metrics, Sentry, and browser tooling, troubleshooting root causes in unfamiliar areas of the codebase and shipping reviewed fixes under urgent timelines to restore platform stability.
- Debugged and optimized first-load application performance in JavaScript and LitElement by eliminating redundant API calls and deferring non-critical requests, cutting network calls 50% and improving first contentful paint by 2 seconds.
- Migrated platform content that had been stored directly in AWS DynamoDB into a self-hosted Directus headless CMS, provisioned on AWS using Terraform (Docker on ECS with Fargate, RDS, VPC), and cut non-prod hosting costs ~30% by right-sizing a separate, lower-spec testing environment.
- Automated recurring data delivery to external parties: a permission-scoped managed SFTP interface on AWS Transfer Family that replaced manual file exchange with a client system, and scheduled reporting that generated vendor-specific CSV exports to dedicated S3 destinations with polling, retry, and exponential backoff.
- Built a GitHub Actions CI/CD pipeline that automatically refreshed the testing environment with production data weekly, giving QA a reliable, repeatable environment with no manual effort and making releases auditable.
- Participated in peer code reviews and code walkthroughs, giving feedback on maintainability and adherence to team coding standards, and wrote unit, integration, and end-to-end tests with Mocha, Chai, and Playwright to catch regressions before release.

Software Developer — D2L Corporation, Wave Team | Ontario, Canada | Mar 2024 – Jul 2024

- Designed and built a role-based access control data layer in DynamoDB modeling administrative roles and permissions, delivered as a customization and extension of the platform's existing admin functionality to restrict access across 50+ permission levels.
- Transferred internally from Learning Services into the Wave engineering team, learning an unfamiliar production platform and its toolchain alongside senior developers, and contributing to feature development, debugging, testing, and code review within the first months; continued with the team when D2L spun Wave out as SkillsWave.

Courseware Developer — D2L Corporation, Learning Services | Ontario, Canada | Mar 2022 – Mar 2024

- Delivered 30+ client projects on tight timelines through requirements gathering with stakeholders and cross-functional teams, translating business requirements into working web solutions built in JavaScript, HTML, and CSS.
- Provided ongoing support, maintenance, and enhancements for existing courseware across multiple client accounts, building to WCAG accessibility standards and applying documented standards and procedures consistently.

EDUCATION

Conestoga College - Kitchener - Computer Applications Development Post Graduate Certificate

September 2020 - September 2021

- Graduated with Distinction
